

iTOP INDIVIDUALLY TRAINED ORAL PROPHYLAXIS

Curaden USA along with Columbus Dental Hygienists' Association

Perfection in Patient Care

Individually Trained Oral Prophylaxis – iTOP is a systematic, comprehensive, hands-on program for daily biofilm management. It is a solution for the question how to keep a good post-treatment care, motivate your patients and ensure dental treatment success. iTOP was developed in Hamburg University, Germany by clinical teacher MUDr. Jiri Sedelmayer and is taught every year in more than 50 countries worldwide.

iTOP will give to the dental professionals the knowledge necessary to act and to dedicate themselves in a most effective way to biofilm control, putting prophylaxis back into the hands of dental professionals.

iTOP reminds dental professionals once again:

«Clean teeth cannot get sick and healthy gums do not bleed»

This seminar will provide you with tools to administer iTOP prophylaxis to your patients in a manner tailored to their individual needs, evidence-based solutions to address management and patient motivation are reviewed. iTOP incorporates practical, hands-on learning and a focus on the motivation needed to implement this knowledge on a daily basis so that your patients can be set up for a lifetime of oral health.

Upon completion of the course the participant will be able to:

- Identify the iTOP Concept
- Know how to proactively Calibrate interdental brushes and flossing (loop technique)
- Explain Interdental care to patients more effectively
- Discuss Toothpaste and mouthwash efficacy in the oral cavity
- List preventative measures to reduce periodontal disease
- Know how to explain the Bass technique by practicing the Hands-on Bass technique
