## PATHWAY TO SAFETY

### Infection Control Practices to Keep Patients and the Community Safe

This course is designed to provide the dental team with an in-depth review of infection control guidelines that will keep patients safe from the moment they step into the office, throughout treatment, and after their appointment is completed. The course will include a review of sterilization protocols, commonly encountered pathogens, applicable ethical principles, and many other intricate steps to ensure patient safety.

**Audience:** Registered Dental Hygienists, Dentists, Assistants, Front Desk Personnel, and Infection Control Coordinators

This course is kindly sponsored by:

Cynthia M. Quint, RDH, BSMS, MEd is a registered dental hygienist with over 25 years of experience in dentistry, including as Clinical Coordinator of the Cuyahoga Community College Dental Hygiene Program, educator, trainer, consultant, private practice hygiene, published author, and speaker. Cynthia earned her master's degree in education in adult learning and development with a focus on management and training, and received a certificate in bioethics. She has taught safety compliance, ethics, head and neck anatomy, and community oral health. She has provided training in the areas of OSHA Bloodborne Pathogens, Hazard Communication, CDC Infection Control Guidelines, and Radiology Safety. She is past-president of the Cleveland Dental Hygienists' Association and currently serves the Columbus Dental Hygienists' Association as chair of both membership and nominating committees. Cynthia is also a member of the Organization for Safety, Asepsis and Prevention. Currently, Cynthia works as adjunct faculty for the Columbus State Community College Dental Hygiene Program, clinical hygienist for a private dental practice, and is a dental consultant and trainer.
